

Prosody as a window to structural processing in reading

Hamutal Kreiner

Asher Koriat

Prosody in speech comprehension

Natural prosody helps listeners to understand *speech* by transforming the serial auditory input into structured patterns that

- Convey information about
 - lexical category
 - ordinal position
 - syntactic segmentation
- Help in organizing and maintaining information in working memory

In speech comprehension – prosody is part of the input

In reading it isn't

What is the relationship between prosody and structural processing in reading?

Prosody in reading

Structural cues monitored early in text processing are used to construe a structural frame for the unfolding sentence (Koriat & Greenberg, 1994)

Close relationship between reading prosody and sentence structure suggests that reading prosody emerges on the basis of the early structural frame (Goldman-Eisler, 1972; Koriat, Greenberg & Kreiner, 2002).

Experiment 1

Is prosody involved in maintaining and organizing verbal information during reading ?

Immediate recall

Normal sentences

The fat cat with the gray stripes ran quickly to the little kitten that lost its way ...

Nonsense sentences:

The sad gate with the small eyes went carefully to the happy computer that

Grouped prosody

The fat cat

with the gray

stripes ran quickly

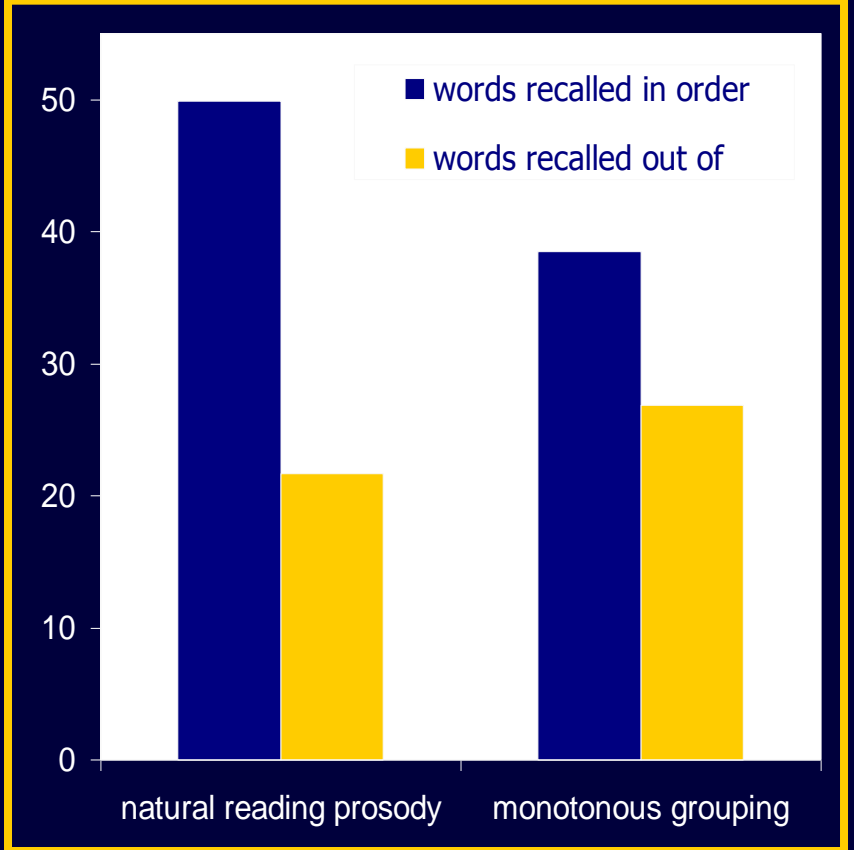

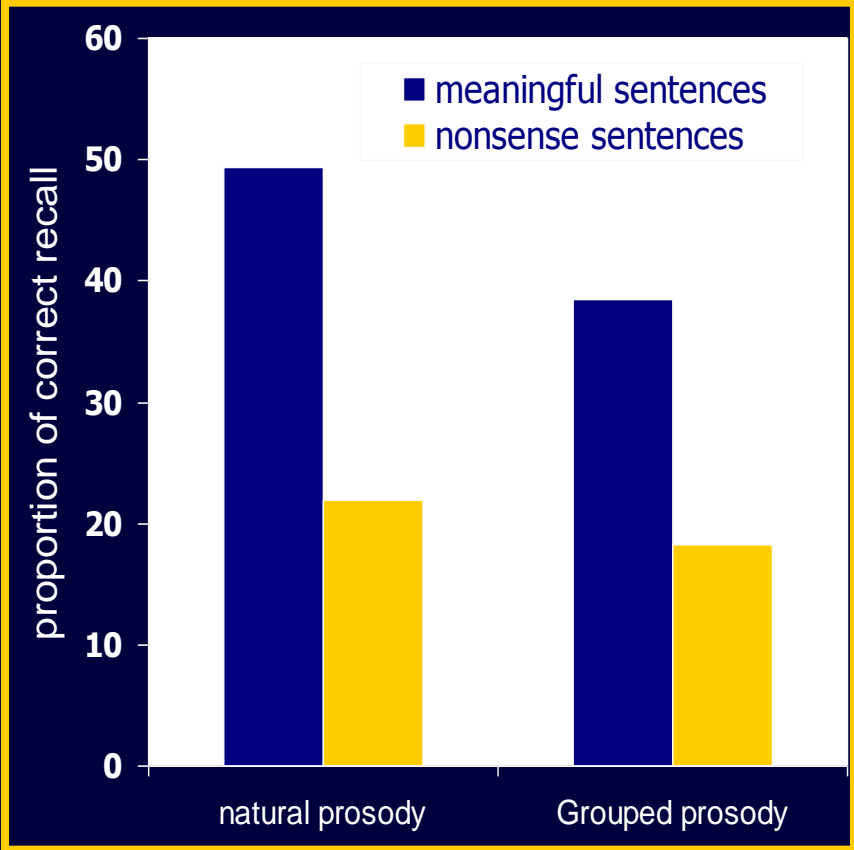

to the little

kitten that lost

its way earlier.

- The correspondence between reading prosody and sentence structure helps in maintaining verbal information, in particular word order, in working memory.
- The benefit from this correspondence is shown in meaningful but not in non-sense sentences.

Experiment 2 & 3

Is reading prosody involved in integrative processes during reading ?

Integrative processes

Experiment 2

Syntactic integration

Gender and Number Agreement

the *models* step proudly on the stage

the *models* steps proudly on the stage

Experiment 3

Semantic integration

Semantic congruency

the models dressed in funny *hats* step...

the models dressed in funny *bars* step...

Adjacent - Match:

The audience who have been waiting excitedly watch how the *models* step proudly on the stage.

Adjacent - Mismatch:

The audience who have been waiting excitedly watch how the *model* step proudly on the stage.

Distant - Match:

The audience watch with a smile how the *models* dressed in a funny hat step proudly ...

Distant - Mismatch:

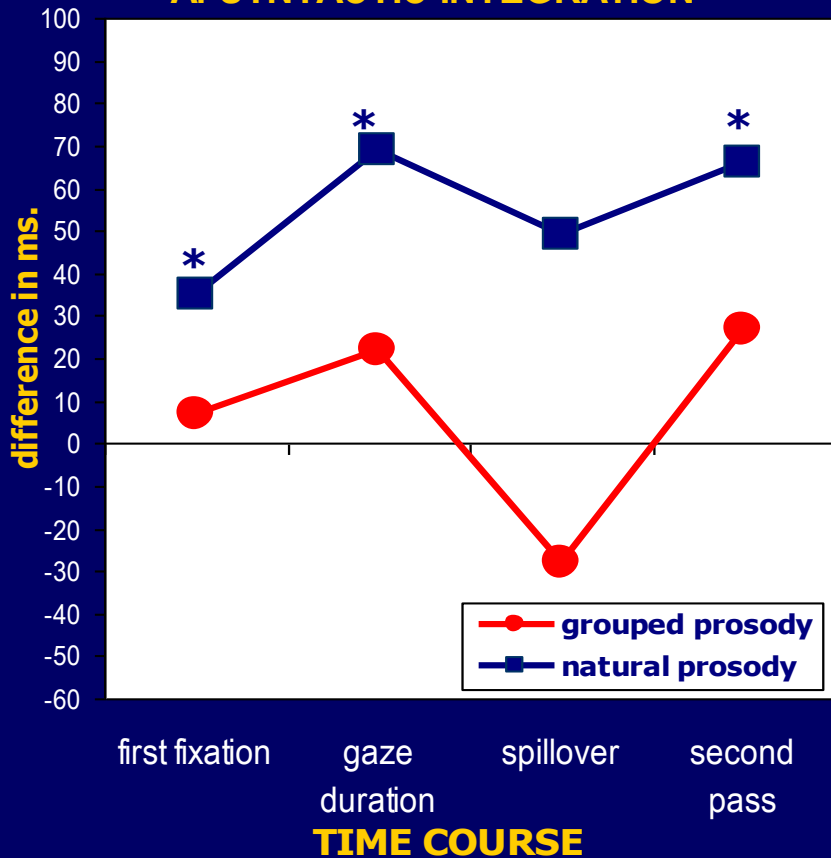

The audience watch with a smile how the *model* dressed in a funny hat step proudly ...

Semantic integration

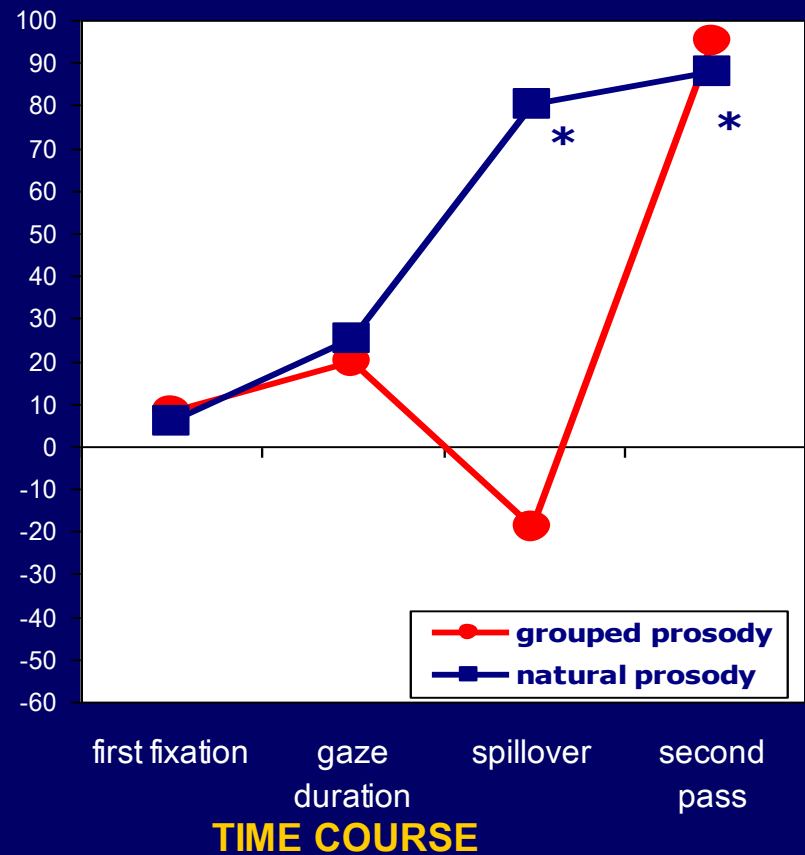

the *models* step
the *models* steps

dressed in funny *hats* step
dressed in funny *bars* step

A. SYNTACTIC INTEGRATION

B. SEMANTIC INTEGRATION

* Difference between incongruent and congruent target verb is significant $p < .05$

Conclusions

Good correspondence between reading prosody and sentence structure contributes to :

- Maintaining and organizing verbal information in working memory while text processing is carried out.
- Fast and Incremental integration of individual words into syntactic and semantic representations.

Prosody in reading

Structural cues monitored early in text processing are used to construe a structural frame for the unfolding sentence
(Koriat & Greenberg, 1994)

Close relationship between reading prosody and sentence structure suggests that reading prosody emerges on the basis of the early structural frame
(Goldman-Eisler, 1972; Koriat, Greenberg & Kreiner, 2002).

“...syntactic analysis and prosody assignment can be interleaved, with prosodic processing following along in the wake of low-level syntactic processing, and feeding later syntactic decisions”

(Fodor, 2002)

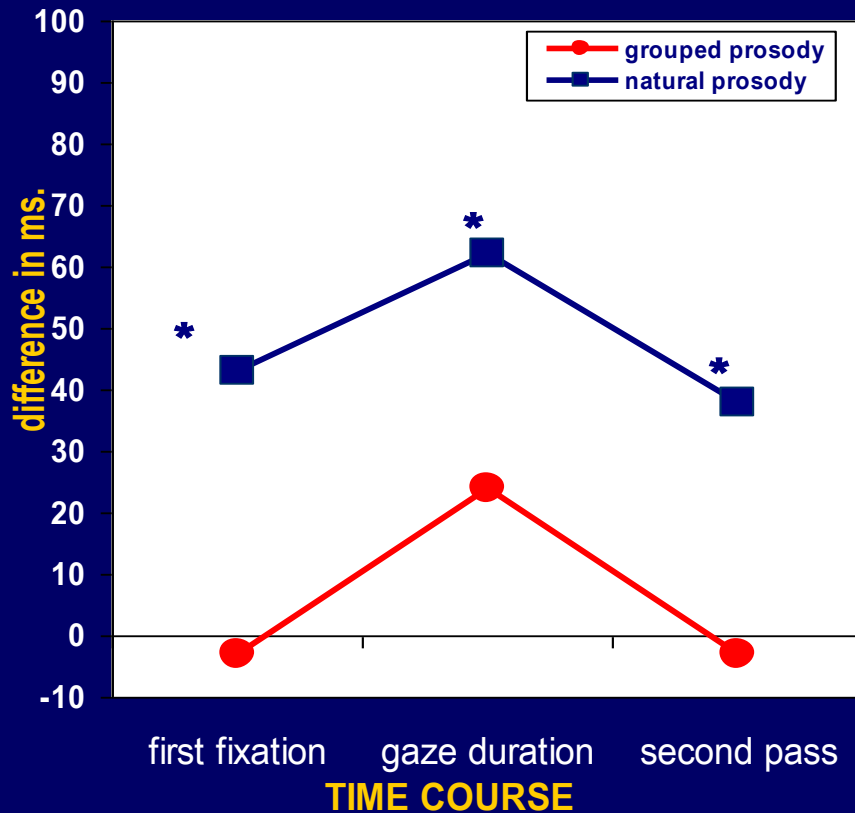

Thanks
