Dr. Sabina Kleitman, University of Sydney, Australia.

Decision Making within Differing Contexts: Individual Difference and Group Dynamics

In this lecture, Dr. Sabina Kleitman will overview the research program currently conducted at her Cognitive and Decision Sciences (CODES) lab in the School of Psychology. The focus will be on the role of fatigue (boredom and sleep deprivation) on decision-making tendencies, the role of individual factors in optimal teaming, and a novel Virtual Reality simulation developed to capture individual differences in adaptability to extreme conditions. A short demo which includes a real-life visualization engine will be provided.

The lecture will take place on the 30th of August 2016, between 12:30 – 13:30, in the lecture hall of the Max Wertheimer Minerva Center for Cognitive Processes and Human Performance, Head of Center: Prof. Ruth Kimchi.
